Answer the following based on Week 17 – Computer Ethics

1. How are you going to solve computer crime?
2. What is ACM Code of Conduct? Explain (No copy and paste)
3. As a student how will you apply Computer Ethics?

Answers:

1. To solve computer crime. We should start to use programs that protect our devices such as VPNs, and Anti-Virus Programs. Other ways to protect your computer is to use decent passwords and have a backup of all the files of your computer. Also, avoid connecting on suspicious free WIFIs because people can use that connection to steal your information.
2. The ACM Code 2018 Task Force, which included members of the Executive Committee Don Gotterbarn (Chair), Bo Brinkman, Catherine Flick, Michael S. Kirkpatrick, Keith Miller, Kate Varansky, and Marty J. Wolf, created the Code and its guiding principles. Eve Anderson, Ron Anderson, Amy Bruckman, Karla Carter, Michael Davis, Penny Duquenoy, Jeremy Epstein, Kai Kimppa, Lorraine Kisselburgh, Shrawan Kumar, Andrew McGettrick, Natasa Milic-Frayling, Denise Oram, Simon Rogerson, David Shama, Janice Sipior, Eugene Spafford, and Les Waguespack are the group's members. The ACM Committee on Professional Ethics set up the Task Force. The larger international ACM membership also contributed significant contributions to the Code. The ACM Council approved this Code and its rules on June 22nd, 2018.
3. As a student I will apply computer ethics by not using my computer knowledge in malicious means, I will follow copyright laws, properly cite the authors of the information I used, and to use computers responsibly.
